 - 1.3 Inhoud van de lijst
 - 1.4 Beheer van de lijst
- 2. Gebruik in ReSpec-documenten**
- 3. Gebruik van specref.geostandaarden.nl**
- A. Referenties**

§ 1. Inleiding

Dit onderdeel is niet-normatief.

§ 1.1 Aanleiding

Binnen Geonovum gebruiken we steeds vaker bibliografische referenties in technische documentatie. Om eenduidigheid en hergebruik te stimuleren is er een centrale localBiblio lijst gedefinieerd binnen het [geonovum-config.js](#) bestand. Deze lijst maakt het eenvoudig om gestandaardiseerde referenties op te nemen in documenten die met ReSpec worden gepubliceerd.

§ 1.2 Voordelen

- ✓ Eén bron voor alle vaak gebruikte referenties (zoals API-specificaties, standaarden, semantische modellen)
- ✓ Altijd up-to-date via centraal beheer
- ✓ Eenvoudig opnemen van referenties via [TAG] in ReSpec
- ✓ Referenties vindbaar met zoektool specref.geostandaarden.nl

§ 1.3 Inhoud van de lijst

De huidige lijst bevat de referenties zoals opgenomen in de [Bijlage Referenties](#).

Heb je een nieuwe referentie nodig of een wijziging? Neem contact op met het standaardenteam of dien een [wijzigingsverzoek](#) in via GitHub.

§ 1.4 Beheer van de lijst

De lijst met referenties (localBiblio) wordt centraal beheerd door Geonovum. Nieuwe referenties kunnen worden voorgesteld via een pull request op de GitHub repository, of via een verzoek aan het standaardteam van Geonovum. Oude versies kunnen als deprecated: true worden gemarkeerd en blijven beschikbaar, maar worden standaard niet getoond.

Heb je een nieuwe referentie nodig of een wijziging? Neem contact op met het standaardteam of dien een [wijzigingsverzoek](#) in via GitHub.

§ 2. Gebruik in ReSpec-documenten

Dit onderdeel is niet-normatief.

Stap voor stap: zo neem je een bibliografische referentie op.

1. Zorg er voor dat geonovum-config.js toegevoegd is aan je ReSpec-document

In de index.html binnen <head>:

```
<script src="https://tools.geostandaarden.nl/respec/config/geonovum-config.js">
```

Tip! Gebruik [NL-ReSpec-GN-template](#) als template repository bij het aanmaken van je eigen repository, dan krijg je de verwijzing naar de geonovum-config.js automatisch in je index.html.

1. Gebruik de referentie in je tekst

Je kunt elke referentie uit localBiblio gebruiken door te verwijzen naar de [[TAG](#)] dus met daaromheen **dubbele haken**:

```
In navolging van [[MIM]] en [[GeoPackage]] wordt in dit document...
```

1. Bekijk het resultaat

ReSpec zet [MIM] automatisch om in een nette bibliografische verwijzing, zoals:

```
MIM – Metamodel Informatie Modellen, Geonovum, 2020
```

1. HTML-output (automatisch gegenereerd)

In de uiteindelijke HTML wordt de bibliografie automatisch weergegeven als onderdeel van de References sectie.

§ 3. Gebruik van specref.geostandaarden.nl

Dit onderdeel is niet-normatief.

De website specref.geostandaarden.nl maakt het mogelijk om snel en eenvoudig alle beschikbare referenties te zoeken en bekijken, inclusief:

Zoeken op titel, auteur, of code

Bekijken van de publicatiedatum en link naar de bron

In- of uitschakelen van verouderde (deprecated) referenties

Kopiëren [TAG] voor direct gebruikt in ReSpec

De site gebruikt live de geonovum-config.js en ondersteunt ook functies als sorteren, pagineren en exporteren.
